                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         subunit of the interleukin-3 (IL-3) receptor, the interleukin-5 (IL-5) receptor and the granulocyte macrophage colony stimulating factor (GM-CSF) receptor. The antisense oligonucleotide inhibits IL-3, IL-5 and GM-CSF receptor expression. IL-3, IL-5 and GM-CSF are cytokines involved in eosinophil proliferation and survival, they are increased in asthma and atopic diseases, and are also involved in the indefinite proliferation of certain neoplastic diseases. The invention relates to antisense oligonucleotides directed against a nucleic acid sequence encoding either a chemokine receptor (CCR3), a common subunit of interleukin-4 (IL-4) and interleukin-13 (IL-13) receptors, or a common subunit of IL-3, IL-5 and GM-CSF receptors. The antisense oligonucleotides can be used in the treatment or prevention of asthma, allergy, hypereosinophilia, general inflammation or cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antisense oligonucleotides directed to CCR3, interleukin or granulocyte macrophage colony stimulating factor receptors, used for treating or preventing asthma, allergies, hypereosinophilia, inflammation or cancer

FFFXXXXOOOOOOOOOOOOOOOOOOOOOOO
                                                                                      The present invention relates to a method for increasing the in vivo efficacy of oligonucleotides and inhibiting inflammation. The coligonucleotides comprise at least one nucleotide substitute of 2.6. diaminopurine (DAP) and/or its analogue. The DAP nucleotide substitutions are useful for increasing in vivo efficacy of a nucleotide acid molecule that is administered to a mammal. The DAP-modified coligonucleotides are useful in antisense therapy for treating and/or preventing pulmonary/respiratory diseases, neurological diseases, curinary system diseases, rheumatological diseases, urinary system diseases, cancers. The respiratory system diseases, urinary system diseases, cancers. The respiratory system diseases is a sickness associated with can inflammation of the lungs, the airways and/or the nose. The respiratory distress syndrome, cystic fibrosis, chronic obstructive clung diseases. Chronic bronchitis, esinusitis and hypereosinophilia. The DAP-modified oligonucleotides are more stable in the body, more effective, and less toxic than standard antisense oligonucleotides. Chronic chasiles are more stable in the body, more adenosine. Abx12681-Abx12698 represent antisense oligonucleotides of for treating or reventing atomic diseases and neonlastic cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                administered to a mammal for inhibiting inflammation in mammals, involves incorporating into the nucleic acid molecule at least one nucleotide substitute -
                                                                     for treating or preventing atopic diseases and neoplastic

```
The present invention relates to a method for increasing the in vivo cc efficacy of oligonucleotides and inhibiting inflammation. The coligonucleotides comprise at least one nucleotide substitute of 2'6'-diaminopurine (DAP) and/or its analogue. The DAP nucleotide cc substitutions are useful for increasing in vivo efficacy of a nucleot cc acid molecule that is administered to a mammal. The DAP-modified cligonucleotides are useful in antisense therapy for treating and/or cc preventing pulmonary/respiratory diseases, neurological diseases, cutinary system diseases, cutinary system diseases, cutinary system diseases, cancers. The respiratory system diseases, general inflammation and cc respiratory system disease is a sickness associated with cc respiratory system disease is selected from pulmonary fibrosis, adult respiratory distress syndrome, cystic fibrosis, chronic obstructive cling disease, chronic bronchitis, esinusitis and hypereosinophilia. The DAP-modified oligonucleotides are more stable in the body, more effective, and less toxic than standard antisense oligonucleotides. CC DAP-modified oligonucleotides are more stable in the body, more considered from present sequence represents a sense oligonucleotides. The present sequence represents a sense oligonucleotides of adenosine. The present sequence represents a sense oligonucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁

                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a method for increasing the in vivo efficacy of oligonucleotides and inhibiting inflammation. The coligonucleotides comprise at least one nucleotide substitute of 2.6. diaminopurine (DAP) and/or its analogue. The DAP nucleotide substitutions are useful for increasing in vivo efficacy of a nucleotic acid molecule that is administered to a mammal. The DAP-modified coligonucleotides are useful in antisense therapy for treating and/or preventing pulmonary/respiratory diseases, neurological diseases, cutaneous diseases, ophthalmological diseases, urinary system diseases, cutaneous diseases, ophthalmological diseases, urinary system diseases, cutaneous diseases, ophthalmological diseases, urinary system diseases, can inflammation of the lungs, the airways and/or the nose. The respiratory system disease is a sickness associated with crespiratory distress syndrome, cystic fibrosis, chronic obstructive cung disease, chronic bronchitis, eosinophilic bronchitis, asthma, callergy, allergic rhinitis, sinusitis and hypereosinophilia. The DAP-modified oligonucleotides are more stable in the body, more effective, and less toxic than standard antisense oligonucleotides. Cadenosine. The present sequence represents an antisense oligonucleotide cadenosine. The present sequence represents an antisense oligonucleotide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cc polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques cc (II). (II) is useful for generating antibodies against it, detecting cc (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating cc disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in cd diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and comino acid sequences. AAS64197-AAS94564 represent novel human cc diagnostic coding sequences of the invention.

CC specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to novel human receptor proteins and nucleic acid molecules encoding such proteins. The invention is useful for preparing a composition for treating a disease or condition mediated by a human receptor protein e.g. leukaemia or cancer. The invention is also useful in gene therapy. The present sequence is human receptor cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             3'UTR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cc used in gene therapy. The cDNAs of the invention may be used in a cc high-throughput methods for detecting differential expression of one or more cDNAs in a sample, or screening several molecules or compounds to identify a molecule or compound that specifically binds a cDNA of the cinvention. A protein encoded by the cDNA may be used to screen several molecules or compounds to identify a ligand that specifically binds to the protein, or to produce or purify an antibody to the protein that can be used to detect a protein in a sample or purify a natural or recombinant protein from a sample. The nucleotides may be useful for diagnosing, staging, treating, or monitoring the progression of treatment of a vascular disease, e.g. atherosclerosis, cancer, coronary reperfusion injury, restenosis, or stroke. The cDNAs can also be used for large-scale genetic or gene expression analysis of several new nucleic acid molecules. Antibodies to the proteins encoded by the cDNAs are useful for diagnosing pre-pathologic disorders, and chronic or acute diseases associated with abnormalities in the expression, corpresents a cDNA of the protein. The present sequence corpresents a cDNA of the invention that is differentially expressed in activated vascular tissue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antiarteriosclerotic; cytostatic; cardiant; hypotensive; antidiabetic; gynaecological; vasotropic and cerebroprotective activities and may be used in gene therapy. The cDNAs of the invention may be used in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention relates to a combination comprising several cDNAs that are differentially expressed in activated vascular tissue. The invention also discloses a high throughput method for detecting differentially expressed cDNAs in a sample. The cDNAs of the invention may have
                                                                                                                                                                                                                                                                                                                                                                Agonist; antagonist; myeloid leukaemia; therapy; screening; diagnosis; granulocyte-macrophage colony stimulating factor; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence encoding beta-chain of a human granulocyte-macrophage colony stimulating factor (GM-CSF) receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Note: The sequence data for this patent did not form part of the specification, but was obtained in electronic format directly from USPTO at http.seqdata.uspto.gov/sequence.html?DocID=20020137081.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Combination for diagnosing, staging, treating, or monitoring the progression of treatment of a vascular disease, e.g. atherosclerosis, comprises several cDNAs that are differentially expressed in activated vascular tissue -

                                                 The invention relates to novel human receptor proteins and nucleic molecules encoding such proteins. The invention is useful for prepa a composition for treating a disease or condition mediated by a hum receptor protein e.g. leukaemia or cancer. The invention is also us in gene therapy. The present sequence is human receptor gene.
                                                                                                                                                                                      Gong

                    CC (GCA), by detecting the level of expression of gene(s) (GS) identified by CC (DNA chip analysis as given in the specification, and comparing CC the expression level are expression of gene(s) (GS) identified by CC (GC, where differential expression of Gs is indicative of GCA. Also included are modulating (M2) GA by contacting GC with an agent CC that alters the expression of at least one gene in Gs; (2) screening (M3) CC chronic) in a tissue, an allergic response in a subject, exposure of a CC subject to a pathogen or sterile inflammatory disease using the CC gene expression profile; (3) detecting (M4) an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a Subject to a pathogen or sterile inflammatory disease, by detecting the CC level of expression in a sample of the tissue of gene(s) from GS, where CC the level of expression of the gene is indicative of inflammation; (CC (4) treating (M5) an inflammation (especially chronic) or in a tissue, an allergic response of a subject to a pathogen or sterile inflammatory disease, by detecting the CC inflammation with an agent that modulates the expression of gene(s) from GS, where CC inflammation with an agent that modulates the expression of gene(s) constanting GA; M3 is useful for screening an agent capable of modulating GCA preferably in an inflammation in a tissue, M4 is useful for cetecting an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile conflammatory disease (e.g. psoriasis, rheumatoid arthritis, conflammatory bowel disease, Crohn's disease, ulcerative colitis, conflammator, inputy, adult respiratory distress syndrome, and M5 is conflammation, conflammation, viral infection, and M5 is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        viral infection; parasitic infection; protozoal infection; fungal infection; sterile inflammatory disease; psoriasis; rheumatoid arthritis; glomerulonephritis; asthma; thrombosis; cardiac reperfusion injury; renal reperfusion injury; ARDS; adult respiratory distress syndrome; inflammatory bowel disease; Crohn's disease; ulcerative colitis; periodontal disease; granulocyte activation; chronic inflammation; allergy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ঠ
                           This is an antisense oligonucleotide directed against the common beta subunit of the interleukin-3 (IL-3) receptor, the interleukin-5 (IL-5) receptor and the granulocyte macrophage colony stimulating factor (GM-CSF) receptor. The antisense oligonucleotide inhibits IL-3, IL-5 and GM-CSF receptor expression. IL-3, IL-5 and GM-CSF are cytokines involved in eosinophil proliferation and survival, they are increased in asthma and atopic diseases, and are also involved in the indefinite proliferation of certain neoplastic diseases. The invention relates to antisense oligonucleotides directed against a nucleic acid sequence encoding either a chemokine receptor (CCR3), a common subunit of interleukin-4 (IL-4) and interleukin-13 (IL-13) receptors, or a common subunit of IL-3, IL-5 and GM-CSF receptors. The antisense oligonucleotides can be used in the treatment or prevention of asthma, allergy, hypereosinophilia, general inflammation or cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                     This is an antisense oligonucleotide directed against the common beta subunit of the interleukin-3 (IL-3) receptor, the interleukin-5 (IL-5) receptor and the granulocyte macrophage colony stimulating factor (GM-CSF) receptor. The antisense oligonucleotide inhibits IL-3, IL-5 and GM-CSF receptor expression. IL-3, IL-5 and GM-CSF are cytokines involved in eosinophil proliferation and survival, they are increased in asthma and atopic diseases, and are also involved in the indefinite proliferation of certain neoplastic diseases. The invention relates to antisense oligonucleotides directed against a nucleic acid sequence encoding either a chemokine receptor (CCR3), a common subunit of interleukin-4 (IL-4) and interleukin-13 (IL-13) receptors, or a common coligonucleotides can be used in the treatment or prevention of asthma, allergy, hypereosinophilia, general inflammation or cancer.

The present invention relates to a method for increasing the in vivo cc efficacy of oligonucleotides and inhibiting inflammation. The oligonucleotides comprise at least one nucleotide substitute of 2.6. diaminopurine (DAP) and/or its analogue. The DAP nucleotide cc substitutions are useful for increasing in vivo efficacy of a nucleic cardid molecule that is administered to a mammal. The DAP-modified coligonucleotides are useful in antisense therapy for treating and/or creventing pulmonary/respiratory diseases, neurological diseases, cutaneous diseases, ophthalmological diseases, urinary system diseases, choners. The respiratory system diseases, urinary system diseases, cancers. The respiratory system diseases is a sickness associated with can inflammation of the lungs, the airways and/or the nose. The respiratory system disease is a sickness associated with can inflammation of the lungs, the airways and/or the nose. The respiratory distress syndrome, cystic fibrosis, chronic obstructive lung disease, chronic bronchitis, eosinophilic bronchitis, adult respiratory distress syndrome, cystic fibrosis, chronic obstructive DAP-modified oligonucleotides are more stable in the body, more effective, and less toxic than standard antisense oligonucleotides. Chap or its analogues are more effective than other substitutes of adenosine. ABX12681-ABX12698 represent antisense oligonucleotides for treating or preventing atopic diseases and neoplastic cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                urinary system disease; pathogen infection; genetic disease; cancer; airway; nose; pulmonary fibrosis; adult respiratory distress syndrome; cystic fibrosis; chronic obstructive lung disease; chronic bronchitis; eosinophilic bronchitis; asthma; allergy; allergic rhinitis; sinusitis; hypereosinophilia; cardiant; ophthalmological; cytostatic; antiasthmatic; antiallergic; antiinflammatory; immunosuppressive; atopic disease; neoplastic cell proliferation; antisense; IL-3; IL-5; interleukin-3 receptor; interleukin-5 receptor; GM-CSF; ss.

       The present invention relates to a method for increasing the in vivo efficacy of oligonucleotides and inhibiting inflammation. The coligonucleotides comprise at least one nucleotide substitute of 2.6. diaminopurine (DAP) and/or its analogue. The DAP nucleotide substitutions are useful for increasing in vivo efficacy of a nucleic acid molecule that is administered to a mammal. The DAP-modified coligonucleotides are useful in antisense therapy for treating and/or preventing pulmonary/respiratory diseases, neurological diseases, cutaneous diseases, rheumatological diseases, urinary system diseases, cardiovascular diseases, rheumatological diseases, urinary system diseases, cardiovascular diseases, general inflammation and cancers. The respiratory system disease is a sickness associated with an inflammation of the lungs, the airways and/or the nose. The respiratory distress syndrome, cystic fibrosis, chronic obstructive lung disease, chronic bronchitis, eosinophilic bronchitis, asthma, condified oligonucleotides are more stable in the body, more and least toxic than attached artisants of the body, more
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁

                         This is an antisense oligonucleotide directed against the common beta subunit of the interleukin-3 (IL-3) receptor, the interleukin-5 (IL-5) receptor and the granulocyte macrophage colony stimulating factor (GM-CSF) receptor. The antisense oligonucleotide inhibits IL-3, IL-5 and GM-CSF receptor expression. IL-3, IL-5 and GM-CSF are cytokines involved in eosinophil proliferation and survival, they are increased in asthma and atopic diseases, and are also involved in the indefinite proliferation of certain neoplastic diseases. The invention relates to antisense oligonucleotides directed against a nucleic acid sequence encoding either a chemokine receptor (CCR3), a common subunit of interleukin-4 (IL-4) and interleukin-13 (IL-13) receptors, or a common subunit of IL-3, IL-5 and GM-CSF receptors. The antisense oligonucleotides can be used in the treatment or prevention of asthma, allergy, hypereosinophilia, general inflammation or cancer.
                                                                                                                                                                                                                                                                                                                    Antisense oligonucleotides directed to CCR3, interleukin or granulocyte macrophage colony stimulating factor receptors, used for treating or preventing asthma, allergies, hypereosinophilia, inflammation or cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Interleukin-3; IL-3; interleukin-5; IL-5; antisense oligonucleotide; asthma; allergy; cancer; receptor expression inhibitor; cytokine; inflammation; hypereosinophilia; eosinophil proliferation; granulocyte macrophage colony stimulating factor; GM-CSF; ss.

                                                                      efficacy of oligonucleotides and inhibiting inflammation. The coligonucleotides comprise at least one nucleotide substitute of 2.6. diaminopurine (DAP) and/or its analogue. The DAP nucleotide substitutions are useful for increasing in vivo efficacy of a nucleic acid molecule that is administered to a mammal. The DAP-modified coligonucleotides are useful in antisense therapy for treating and/or preventing pulmonary/respiratory diseases, neurological diseases, cardiovascular diseases, rheumatological diseases, digestive diseases, curinary system diseases, curinary system diseases, cancers. The respiratory system diseases, general inflammation and cancers. The respiratory system disease is a sickness associated with an inflammation of the lungs, the airways and/or the nose. The respiratory distress syndrome, cystic fibrosis, chronic obstructive lung disease, chronic bronchitis, eosinophilic bronchitis, asthma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; inflammation; 2'6'-diaminopurine; DAP; antisense therapy; DAP-modified oligonucleotide; pulmonary disease; respiratory disease; neurological disease; cardiovascular disease; rheumatological disease; digestive disease; cutaneous disease; ophthalmological disease; urinary system disease; pathogen infection; genetic disease; cancer; airway; nose; pulmonary fibrosis; adult respiratory distress syndrome; cystic fibrosis; chronic obstructive lung disease; chronic bronchitis; eosinophilic bronchitis; asthma; allergy; allergic rhinitis; sinusitis; hypereosinophilia; cardiant; ophthalmological; cytostatic; antiasthmatic; antiallergic; antiinflammatory; immunosuppressive; atopic disease; neoplastic cell proliferation; antisense; IL-3; IL-5; interleukin-3 receptor; interleukin-5 receptor; GM-CSF; ss.
allergy, allergic rhinitis, sinusitis and hypereosinophilia. The DAP-modified oligonucleotides are more stable in the body, more effective, and less toxic than standard antisense oligonucleotides. DAP or its analogues are more effective than other substitutes of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC preventing pulmonary/respiratory diseases, neurological diseases,
CC cardiovascular diseases, rheumatological diseases, digestive diseases,
CC cutaneous diseases, ophthalmological diseases, urinary system diseases,
CC cutaneous diseases, ophthalmological diseases, urinary system diseases,
CC pathogen infections, genetic diseases, general inflammation and
CC cancers. The respiratory system disease is a sickness associated with
CC an inflammation of the lungs, the airways and/or the nose. The
CC respiratory system disease is selected from pulmonary fibrosis, adult
CC respiratory distress syndrome, cystic fibrosis, chronic obstructive
CC lung disease, chronic bronchitis, eosinophilic bronchitis, asthma,
CC lung disease, chronic bronchitis, eosinophilic bronchitis, asthma,
CC allergy, allergic rhinitis, sinusitis and hypereosinophilia. The
CC allergy, and less toxic than standard antisense oligonucleotides.
CC DAP or its analogues are more effective than other substitutes of
CC adenosine. The present sequence represents an antisense oligonucleotide
CC used in the examples of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         efficacy of oligonucleotides and inhibiting inflammation. The oligonucleotides comprise at least one nucleotide substitute of 2'6'-diaminopurine (DAP) and/or its analogue. The DAP nucleotide substitutions are useful for increasing in vivo efficacy of a nucleic acid molecule that is administered to a mammal. The DAP-modified oligonucleotides are useful in antisense therapy for treating and/or preventing pulmonary/respiratory diseases, neurological diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Homo sapiens Synthetic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a method for increasing the in vivo efficacy of oligonucleotides and inhibiting inflammation. The coligonucleotides comprise at least one nucleotide substitute of CC 2'6'-diaminopurine (DAP) and/or its analogue. The DAP nucleotide cC substitutions are useful for increasing in vivo efficacy of a nucleic acid molecule that is administered to a mammal. The DAP-modified coligonucleotides are useful in antisense therapy for treating and/or preventing pulmonary/respiratory diseases, neurological diseases, cutaneous diseases, ophthalmological diseases, digestive diseases, cutaneous diseases, ophthalmological diseases, urinary system diseases, pathogen infections, genetic diseases, general inflammation and cancers. The respiratory system disease is a sickness associated with an inflammation of the lungs, the airways and/or the nose. The respiratory system disease is a sickness associated with crapitatory distress syndrome, cystic fibrosis, chronic obstructive lung disease, chronic bronchitis, eosinophilic bronchitis, adult respiratory distress syndrome, cystic fibrosis, chronic obstructive allergy, allergic rhinitis, sinusitis and hypereosinophilia. The CDAP-modified oligonucleotides are more stable in the body, more effective, and less toxic than standard antisense oligonucleotides. CDAP or its analogues are more effective than other substitutes of cused in the examples of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For certifying mutations or deletions in a patient's genome certain the patients own production of (I). Additionally, (I) complement the patients own production of (I). Additionally, (I) complement the patients own production of (I). Additionally, (I) complement the patients own production of (I). Additionally, (I) complement in a host cell and culturing the cell to express the contein. (I) proteins and polynucleotides may be used to prevent, complement in treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169 capresent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ARF70984 to AAF71133 encode the Corynebacterium glutamicum stress, CC resistance, and tolerance (SRT) proteins given in AAB78871 to AAB79020. CC The C. glutamicum SRT genes (I) can be used in vectors (II) for CC expression in host cells and production of fine chemicals, such as, an CC organic acid, a proteinogenic or nonproteinogenic amino acid (preferred), CC a purine or pyrimidine base, a nucleoside, a nucleotide, a lipid, a saturated or unsaturated fatty acid, a diol, a carbohydrate, an aromatic CC compound, a vitamin, a cofactor, a polyketide, or an enzyme. The fine CC chemical production can be modulated. The presence of (I) or the SRT proteins (III) encoded by them are used for diagnosing the presence or activity of Corynebacterium diphtheriae. (I), (II), (III) and host cells containing them can be used to map the genomes of organisms related to C. glutamicum, to identify and localise C. glutamicum sequences of cregions required for function, in modulating the SRT protein cregions required for function, in modulating the SRT protein activity, can an environment that is normally contained by it increase the survival of C. glutamicum to ourvive in an environment that is normally condended by it increase the survival of C. glutamicum to chemical and convironmental hazards and provide a means for continued growth and convironmental hazards and provide a means for continued growth and convict conditions, the yield, production and/or efficiency or production of fine chemicals from a culture may be increased.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           맑

For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic antigen genomic sequences from the present invention. AAKS4942 to AAKS4950 and AAK82169 are protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; immune; haematopoietic; immune/haematopoietic antigen; cancer; cytostatic; gene therapy; vaccine; metastasis; ds.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169 crepresent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    01-DEC-2000;

                          polypeptide (II) sequences. (I) is useful as hybridisation probes, cc polymerase chain reaction (PCR) primers, oligomers, and for chromosome cc and gene mapping, and in recombinant production of (II). The conversal activity of (II) is useful in gene therapy techniques cc to restore normal activity of (II) or to treat disease states involving cc (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating cc disgress involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in cc diagnostics, forensics, gene mapping, identification of mutations cc and to produce other types of data and products dependent on DNA and canino acid sequences. AAS64197-AAS94564 represent novel human cc diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at figure in the pub/published pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
Sequence
                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes.
                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 1; SEQ ID No 3510; 103pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  31-MAR-2000; 2000US-0540217.

                                                                                                                                                     The invention relates to isolated polynucleotide (I) and CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving CC (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating CC dispreders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations cc and to produce other types of data and products dependent on DNA and CC amino acid sequences. AAS64197-AAS94564 represent novel human CC Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO CC at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                               Sequences AAA72236-A72284 represent cDNAs encoding Drosophila
CC melanogaster odorant receptors (AAB20901-B20949). These proteins function
CC as olfactory receptors, and are thought to be members of the G
CC protein-coupled receptors, and are thought to be members of the G
CC protein-coupled receptors, and are thought to be members of the G
CC protein-coupled receptors may be used to generate expression
CC constructs, host cells containing such constructs, and transgenic
CC insects. Cells which express the odorant receptor genes may be used in
CC methods to identify agents which modulate expression of these genes, and
CC receptor nucleic acids may also be used to identify corresponding genes
CC in other insects, such as those which damage crops or transmit disease.
CC The odorant receptor proteins may be used to identify agents which
CC modulate their activity, to identify binding partners, as antigens to
CC modulate their activity, to identify insect behaviour. The proteins
CC may be also be used in methods of behaviour modification. Such methods
CC such as pheromones. Modification of insect behaviour in response to odorants
CC applications, such as in pest control (e.g., by disrupting the feeding
CC and/or nucleotides may also be used to identify suppetite suppressants, to
CC and/or nucleotides may also be used to identify suppetite suppressants, to
CC and/or such as in pest control (e.g., by disrupting the feeding
CC and/or nucleotides may also be used to identify suppetite suppressants, to
CC trap odours of a specific type, as biosensors for the detection of
CC chiefly.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Odorant receptor; Drosophila; olfactory receptor; g protein-coupled receptor; GPCR superfamily; transgenic insect; insect behaviour modification; pest control; pollinator attraction; biosensor; odour detection; odour identification; apiculture; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New nucleic acid encoding a Drosophila olfactory receptor, useful identifying modulating agents - \,

                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is the coding sequence for the previously identified Drosophila melanogaster odorant receptor DOR119. The odorant genes and proteins, such as those provided by the invention, are useful as they aid in the study of the olfactory organ in mammals, as well as aiding the understanding of the link between odour recognition and behaviour in insects. They also enable the identification of compounds capable of activating and inhibiting the receptors, allow the control of pest populations via the use of alarm odour ligands and via the use of ligands which interfere with the interaction between odorant ligands and receptors associated with fertility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Movel nucleic acid encoding an insect odorant receptor, modulator compounds that are useful in controlling pest
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Drosophila melanogaster odorant receptor DOR119 coding sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Odorant receptor; fruit fly; DOR119; odour recognition; pest control;

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).

The method of the invention is useful for determination of the differential expression of the genes of M. capsulatus, and for studying gene expression on a genomic scale and in gene expression assays of M. capsulatus genes. The sequences shown in ABQ90016-ABQ91855 represent M. capsulatus genes for use in arrays of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel DNA array useful for determining differential expression of Methylococcus capsulatus genes, comprises polynucleotides or oligonucleotides representative for a selective number of Methylococcus

            This invention describes novel isolated nucleic acid molecules (I) encoding a human secreted proteins (II) which have immunosuppressive, antiarthritic, antirheumatic, antiproliferative, cytostatic, cardiant, vasotropic, cerebroprotective, nootropic, neuroprotective, antibacterial, virucide, fungicide, ophthalmological and vulnerary activity and can be used for gene therapy. (I) and (II) are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel DNA array giving a representation of a number of Methylococcus capsulatus genes. The method of the invention is useful for determination of the differential expression of the genes of M. capsulatus, and for studying gene expression on a genomic scale and in gene expression assays of M. capsulatus genes. The sequences shown in ABQ90016-ABQ91855 represent M. capsulatus genes for use in arrays of the
                                                                                                                                                             Nucleic acid molecules encoding human secreted preventing, treating or ameliorating a disorder Parkinson's diseases and cancers -

cc diagnosing a pathological condition or susceptibility to a pathological condition. The antibodies to (II) can also be used in alleviating cc symptoms associated with the disorders and in diagnostic immunoassays ce.g. radioimmunoassays or enzyme linked immunosorbent assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases cc e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms cf the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischemia, angiogenesis, nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, crivases and fungi and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, corneal as a food additive or preservative to increase or decrease storage capabilities.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    08-JUL-1999;

CC resistance, and tolerance (SRT) proteins given in AAB78871 to AAB79020.
CC The C. glutamicum SRT genes (I) can be used in vectors (II) for
CC expression in host cells and production of fine chemicals, such as, an
CC organic acid, a proteinogenic or nonproteinogenic amino acid (preferred),
CC a purine or pyrimidine base, a nucleoside, a nucleotide, a lipid, a
CC compound, a vitamin, a cofactor, a polyketide, or an enzyme. The fine
CC compound, a vitamin, a cofactor, a polyketide, or an enzyme. The fine
CC chemical production can be modulated. The presence of (I) or the SRT
CC proteins (III) encoded by them are used for diagnosing the presence
CC cells containing them can be used to map the genomes of organisms related
CC cells containing them can be used to map the genomes of organisms related
CC conjutamicum, to identify and localise C. glutamicum sequences of
CC interest, in evolutionary studies, in determination of SRT protein
CC glutamicum to survive in an environment that is normally
CC environmentally or chemically hazardous to it. (I) and protein activity,
CC environmentally or chemically hazardous to it. (I) and protein molecules
CC encoded by it increase the survival of C. glutamicum to chemical and
CC environmental hazards and provide a means for continued growth and
CC environmental hazards and provide a means for continued growth rate in poor or
CC continued growth rate or maintaining a normal growth rate in poor or
CC continued growth rate or maintaining a normal growth rate in poor or
CC continued growth rate or maintaining a normal growth rate in poor or
CC of fine chemicals from a culture may be increased.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   뭐
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ঠ

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).
  This sequence encodes a human protein which contains a SRCR (scavenger receptor, cysteine-rich) domain. The gene and encoded protein can be use to diagnose or treat tumours, particularly of the nervous system (medullo-blastoma or glioma) or breast. The DNA sequence and probes derived from it, are used to identify genes that express SRCR-domain containing proteins, to determine the form in which these proteins exist
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Scavenger receptor cysteine rich domain; SRCR; diagnosis; treatment; nervous system; medullo-blastoma; glioma; breast; detection;
                                                                                                                                                                                             Claim 4; Fig
                                                                                                                                                                                                                                                   Proteins containing scavenger receptor, cysteine rich useful for diagnosis and treatment of tumours
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               18-JUL-1997;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S
        The invention relates to novel isolated nucleic acid molecules (I) CC encoding human secreted proteins (II). (I) and (II) are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, CC goats, horses, cats, dogs, chickens or sheep. (I) and (II) may be used in the prevention, treatment and diagnosis of diseases associated with CC inappropriate expression of secreted proteins. (I) and complementary gequences may also be used as DNA probes in diagnostic assays (e.g. CC polymerase chain reactions (PCR)) to detect and quantitate the presence of similar nucleic acid sequences in samples, and so which patients may be in need of restorative therapy. (II) may also be used as antigens in the production of antibodies and in assays to identify modulators (agonists and antagonists) of the expression and activity of the secreted proteins. The anti-(II) antibodies and antagonists may also be used to down regulate expression and activity of (II). The anti-(II) antibodies may also be used as diagnostic agents for detecting the presence of (II) in samples (e.g. by enzyme linked immunosorbant assay (ELISA)). The condition of antibodies immune/autoimmune diseases (e.g. HIV) and intibodies and multiple aclassion and activity of the secreted conditions of the secreted proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

The protein can be used to detect the presence of autoantibodies and antibodies which regulate its expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cerebroprotective; thrombolytic; antimicrobial; ophthalmological; cytostatic; Alzheimer's disease; Parkinson's disease; human; cancer multiple sclerosis; cancer; hyperproliferative disorder; infection; Gaucher's disease; neurological disease; cerebrovascular disorder;

(I) and (II), agonists, antagonists and antibodies can also be used to promote wound healing, maintain organs before transplantation, and support cell culture of primary tissues. AAS33043-AAS33486 represent human secreted protein coding sequences, PCR primers, and related sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification but was obtained in electronic format directly from WIPO at: ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
```

The invention relates to novel isolated nucleic acid molecules (I) encoding human secreted proteins (II). (I) and (II) are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. (I) and (II) may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate expression of secreted proteins. (I) and complementary sequences may also be used as DNA probes in diagnostic assays (e.g. polymerase chain reactions (PCR)) to detect and quantitate the presence of similar nucleic acid sequences in samples, and so which patients may

The anti-(II) antibodies and antagonists may also be used to come regulate expression and activity of (II). The anti-(II) antibodies and antagonists may also be used to come regulate expression and activity of (III). The anti-(II) antibodies come also be used as diagnostic agents for detecting the presence of (II) come in samples (e.g. by enzyme linked immunosorbant assay (ELISA)). The come in samples include for example: immune/autoimmune diseases (e.g. HIV (human immunodeficiency virus) infections, anaemia, rheumatoid arthritis cand multiple sclerosis), cancers and hyperproliferative disorders (e.g. comelanomas, neoplasms of the breast or liver, Sezary syndrome and coucher's disease, neurological diseases (e.g. Alzheimer's disease, cardiac, arrest e.g. Alzheimer's disease, cardiac, arrest e.g. cardiac, cardiac, cardiac, cardiac arrest, tachycardia, compain and thrombosis), infections caused by bacteria, viruses and coular disorders (e.g. corneal infections). (I) and (II), agonists, antagonists and antibodies can also be used to promote wound compain and cristain organs before transplantation, and support cell culture of primary tissues. AAS33043-AAS33486 represent human secreted protein coding sequences, PCR primers, and related sequences of the invention. CC oding sequence data for this patent did not appear in the printed specification but was obtained in electronic format directly from WIPO cat: ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequences AAS59506-AAS59804 represent DNA molecules encoding CC Propionibacterium acnes immunogenic polypeptides. The proteins and their CC diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and consequences are used in the treatment, prevention and CC osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes sinfections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA). This sequence encodes the polypeptides shown in AAU55069-AAU55304 and AAU67565-AAU67566.

Note: The sequence data for this patent did not form part of the printed expecification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

```

This nucleotide sequence contains a fragment of a gene of encoding a protein which contains a SRCR (scavenger

which is capable receptor,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cysteine-rich) domain. The gene and encoded protein can be used to diagnose or treat tumours, particularly of the nervous system (medullo-blastoma or glioma) or breast. The DNA sequence and probes derived from it, are used to identify genes that express SRCR-domain containing proteins, to determine the form in which these proteins exand to assess the significance of individual forms on cellular properties. The protein can be used to detect the presence of autoantibodies and antibodies which regulate its expression.
                                                  sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nakagawa S,

                                                                                                                    This is an antisense oligonucleotide directed against the common beta subunit of the interleukin-3 (IL-3) receptor, the interleukin-5 (IL-5) receptor and the granulocyte macrophage colony stimulating factor (GM-CSF) receptor. The antisense oligonucleotide inhibits IL-3, IL-5 and GM-CSF receptor expression. IL-3, IL-5 and GM-CSF are cytokines involved in eosinophil proliferation and survival, they are increased in asthma and atopic diseases, and are also involved in the indefinite proliferation of certain neoplastic diseases. The invention relates to antisense oligonucleotides directed against a nucleic acid sequence encoding either a chemokine receptor (CCR3), a common subunit of interleukin-4 (IL-4) and interleukin-13 (IL-13) receptors, or a common oligonucleotides can be used in the treatment or prevention of asthma, allergy, hypereosinophilia, general inflammation or cancer.
